

Milwaukee[®]
SAWZALL[®]

USER PRIORITY #1: FAST CUTS

Multiple variables have been optimized through a proprietary design process to deliver fast cuts. Most notably, the coarser 5 TPI pattern **cuts more aggressively** than 6 TPI alternatives.

USER PRIORITY #2: NAIL DURABILITY

NAIL GUARD[™]

ORDINARY TOOTH

Historically, faster cutting blades have suffered from relatively low tooth durability when impacting nails. Milwaukee has **solved this trade-off** with a new tooth form that keeps nails out of the gullet and engaged with the cutting edge. The **Nail Guard**[™] design cuts through nails without fracturing teeth.

USER PRIORITY #3: FAST PLUNGING

FANG TIP™

ORDINARY TIP

A pair of unique, fang-like teeth and an extra large gullet combine to deliver **the fastest plunge cut** available in the industry. While ordinary designs bounce or skate along the work piece surface, this **Fang Tip™** design bites into the wood on first contact.
